

16 global goals created for a better world. The center goal is global development. UNDP committee's agenda items are 8th and 9th goals. The 8th goal is decent work and economic growth and the 9th goal is industry, innovation and infrastructure. In these two goals the countries must have economical and infrastructural development. In today's world, undeveloped countries are economically and infrastructurally weak. This situation is not positive. Many workers work in inadmissible fields and live in poor conditions. The economy is unbalanced and that causes a lack of high living standards. Goal 8 and 9's aim is making unproductive conditions better. (globalgoals)

Economic liberty is important. UN works for protecting human rights on economic situations. Economic, social and cultural rights international contract was accepted by the UN and opened for signature on 16 December 1966.(insanhaklarimerkzi.bilgi.edu.tr) This contract consists of country teamwork for global development.

In Czechia inflation is at the highest rate with 17.2 percent since 1993. (ntv, 2022) Even though inflation is getting higher, the unemployment rate is pretty low according to undeveloped countries. It's 3.5 percent in October 2022. (tr.tradingeconomics) That rate seems low but it is getting higher too. In July 2022, unemployed rate was 3.3 percent. (tr.tradingeconomics) Their economy is strong according to some countries but rates getting higher according to Czechia's own history. In May 2022 Czechia government increased political interest to decrease inflation.

The most important solution for global economical issues is teamwork. Each country's economy is related to other ones. countries should care and try to help other economies develop or their own development.
