

POSITION PAPER- BHMUN 2023, 24-25-26 November

Delegation of Turkiye

Turkiye's 1960's period starts with the military coup had done by the military against to the government. With the 1960 military coup Turkiye goes into the era of the new-left movement and counterculture. Because it was the first remarkable act that had done against to the government and symbolises that addition to the citizens military community is not also satisfied with the politics that government makes and wants to be more liberal. Turkish government was taking oppressive decisions and in an economic crisis so that this wish of being liberal became apparent. People wants equality and freedom. However, the implementation of death sentence and the other punishments to the people because of their ideology as whether they are conservative or socialist/communist show that even with the 1960's counterculture perspective has risen we are not totally liberal yet and we are also taking the right to live of a person with implementing the death sentence which restrain the freedom. As an example we can show the death of prime minister Adnan Menderes's death. In addition, the citizens especially students are not comfortable with this situation Turkiye's in. And Turkiye choose to be in the capitalist block and have good relations with USA. Turkiye expects economic support from the USA and hopes that USA can make us get out of the economic crisis which we are dealing with a long time and increases the hard implementations of the government. With parallel to this act of government students' rebellions are increasing too and it puts us in a situation that our low well-being decrease more and more and make our home affairs hard to deal with.
