

COMMITTEE: UNDP

COUNTRY:GREECE

Greece is a country located in Southeastern Europe , which has a population of 10.64 million and a surface area of 131,957 square kilometers, . Neighboring countries are Albania, Macedonia, Bulgaria and Turkey. Greece's currency is European Euro

The Greek Republic recognizes the significance of shifting to sustainable energy sources in order to address environmental issues. Greece, a country dedicated to addressing climate change, acknowledges biomass energy as a practical choice for its varied energy portfolio. Biomass, which is produced from organic materials, is compatible with Greece's abundant agricultural output and presents a chance to utilize renewable energy sources while fostering rural development.

Greece supports a well-rounded strategy and emphasizes the necessity of stringent sustainability standards for the production of biomass. By doing this, negative effects on land use and food security are avoided and ecosystems and biodiversity are protected. In order to create clear guidelines for the sustainable utilization of biomass and to promote responsible practices and technological advancements, the Republic of Greece encourages international collaboration.

Greece also highlights the socioeconomic advantages of biomass energy, especially for rural areas. Greece aims to improve energy self-sufficiency, empower communities, and create jobs through investing in local biomass production. The country supports international collaboration to exchange best practices, information, and technological advancements, facilitating the world's shift to a future with more sustainable energy sources.

To sum up, the Republic of Greece is in favor of including biomass energy into the world's energy mix and emphasizes the significance of international cooperation, socioeconomic development, and sustainability in achieving a more resilient and greener future.
