Country: Germany

Committee: UNESCO - 2

Topic: Reducing Inequalities in Digital Education

Germany is a country in Central Europe, bordering Denmark in the north, Poland and the Czech Republic in the east, Austria and Switzerland in the south, France and Luxembourg in the south-west, and Belgium and the Netherlands in the north-west. Germany is the third country that has the best education system. Our population is around 84 million. And Germany's life expectancy is 82.

In 2020, most of the children did not have access to digital education. This is a very important issue because every child must learn and receive education. In places like Niger, Chad, and Afghanistan, this problem is serious. They do not have enough technical equipment, so many children cannot access digital education. Germany thinks that this is a very important issue to solve. German organizations like School Cloud and DigitalPakt Schule Germany are already working for a better education. They have helped in providing free digital infrastructure for schools, helped reduce digital inequality, and collected and shared digital teaching materials. These efforts show that Germany is committed to help reduce inequalities in digital education.

Germany suggests that the UN should focus on supporting projects that expand global internet access and fund schools in low-income countries. It's also important to support device accessibility. Germany is ready to work with other countries to make sure everyone can have the same equalities for digital education.
