

Country: Pakistan

Committee: United Nations Educational, Scientific and Cultural Organization (UNESCO)

Topic: Reducing Inequalities in Digital Education

Pakistan is one of the most crowded countries in the world and it is located in Asia.

It has a multi-national structure and also a different culture that Pakistan is known for.

Pakistan has a promising economy with a GDP of 271.1 billion and 1,707 USD per capita.

Generally, 31% of the children in the world cannot access digital education.

Mostly in the Middle East and North Africa, this problem is really serious in those places.

The percentage of children who have access to digital education goes down to nearly 20%.

The digital divide has also affected Pakistan badly as the digital gap starts to increase.

Pakistan's access to the internet percentage is 77.8%.

Pakistan is looking forward to solving these urgent problems and reducing the inequality in digital education.

Pakistan thinks that the United Nations should give priority to reducing the digital gap in rural areas and the places that really need it.

Pakistan would like to work together with other nations to reduce the inequalities in digital education and ensure that the digital gap won't get bigger.
