

Committee: WFP

Country: Algeria

Delegate: CAN EREN SAHIN

Agenda Item: Ensuring Food Security for Children in Emergencies

Introduction

Algeria is a dry country. Most of the land is the Sahara Desert. Because of the hot weather and little water, it is difficult to grow food. Algeria needs to import a lot of food from other countries. The population of Algeria is growing every year, so the need for water and food is also growing.

Issues and Their Effects

Algeria has problems with water and farming. There are not enough irrigation systems, and many people do not have easy access to clean water. This makes farming difficult.

Algeria also has problems producing enough food for its growing population. The country needs to increase food production, especially in areas near the Sahara. New farming methods and modern technology can help.

Algeria is located between 26° and 37° North, and 8° and 12° East. The country is important in the region because it produces and exports natural gas and energy. Algeria also works on international projects, supports peace and security, and helps other countries with humanitarian aid.

a. Better Irrigation Systems

- Build new irrigation systems
- Improve access to clean water
- Use modern irrigation methods like drip irrigation

b. More Food Production

- Start new farming projects near the Sahara
- Use modern technology for farming
- Grow more food locally to reduce imports

c. Cooperation with Other Countries

- Work with neighboring countries on water problems
- Get support from international organizations
- Join programs for sustainable farming and food security
