

Country: Albania

Committee: The Food and Agriculture Organization (FAO)

Agenda Item: Strategies For Advancing Sustainable Agricultural Practices In The Green Transition

The Republic of Albania is a country located in the Balkans. The country shares land borders with Montenegro to the northwest, Kosovo to the northeast, North Macedonia to the east, and Greece to the south. The capital of the country is Tirana. Even though most of the people in Albania are Muslim, Albania doesn't have an official religion. Albanian is the official language. Albania is a unitary parliamentary constitutional republic. Albania has a wealth of natural resources. It is rich in petroleum and gas resources both on and offshore. It is home to the largest onshore oil field in Continental Europe.

Albania is a small country with an enormous agricultural capability. Agriculture in Albania is extensively dependent on the population. Like many other international locations, Albania does face certain demanding situations. Within the area of its inexperienced transition, Albania is committed to improving agricultural productivity even as lowering environmental impact.

1. **Unsustainable Practices:** The overuse of chemical pesticides, water pollution, harming the inexperienced, air pollutants, and so on. Decreases the prosperity of agriculture.
2. **Climate Change:** Rising temperatures and glacier melting reason the husbandry's balance.
3. **Rural Inequality:** Limited infrastructure and resources are opportunities that can set up problems.

The authorities have to focus on making an investment in contemporary technology like precision farming, that optimizes aid use whilst minimizing waste. Training packages want to be furnished to permit farmers to undertake those technologies nicely. As the education programs move on, the authorities need to also hold the training of farming as excessive as viable so that prosperity will increase.

By implementing those strategies, Albania can:

Improve agricultural productiveness and food safety.

- Reduce greenhouse gas emissions and fight weather exchange.

- Conserve herbal sources for destiny generations.

- Enhance the livelihoods of rural communities with the aid of a growing sustainable economic boom.

Moreover, the governments need to put money into agriculture development so that it grows on its own.

It is vital for Albania to maintain to broaden sustainable agriculture in the framework of the green transition for economic and environmental views. The United States of America can obtain stability in agricultural improvement and ecological upkeep, contributing to global sustainability goals, by means of adopting the proposed techniques.
