

Committee: LEGAL

Agenda Item: International Regulations on Cybersecurity and Artificial Intelligence

Country: The Republic of India

The Republic of India is located in Asia. It has a population of more than 1400 billion people. Its capital is New Delhi. Pakistan, China, Nepal, Bhutan, Bangladesh, Myanmar, Afghanistan, Sri Lanka, and the Maldives are the neighbouring countries of India. It is located next to the Indian Ocean. It is the seventh-largest country in the world, with a total area of more than 3 million square kilometres.

The Republic of India has one of the world's fastest-growing digital economies. We believe that technology should be used to improve the lives of all people. India has programs to promote innovation, digital education, and equal access to technology. However, India also recognizes that the growth of artificial intelligence and the increasing number of cyberattacks create serious legal, ethical, and security challenges. These challenges must be addressed through international cooperation. India believes that international laws, including the UN Charter, already apply to cyberspace and AI, but clearer rules are needed to prevent misuse. Cyberattacks on important systems, misinformation, and the use of AI in weapons all threaten peace. The Legal Committee should work to define responsible behavior in cyberspace and create international guidelines to ensure that AI is used safely, fairly, and for the benefit of all.

India is in favor of creating a UN-led framework for regulating cybersecurity and AI. This should include: global standards to protect countries from cyberattacks, ethical rules to make AI transparent and accountable, programs that help developing nations build digital and legal capacity, and protection of data privacy and national sovereignty. India believes in working together, being fair, and seeking peace. India is ready to work with all nations to create a safe and ethical digital future.
