

Committee: LEGAL

Topic: International Regulations on Cybersecurity and Artificial Intelligence

The Dominion of Canada is the second largest country in the world, known for its diverse culture and rich heritage. It is very active in international matters and a significantly safe country, ranked the fifth safest country in the world by The Global Peace index.

Artificial intelligence is one of the most rapidly growing technologies in the present day. Every country has a different approach to this, with Canada being one of the leading countries involved in the development of AI. Canada looks forward to using AI in cybersecurity to ensure a safe environment for the future. Since AI is non-human it can detect threats and hacks thoroughly. But we must note that AI is a developing technology, and it cannot adapt to the changing legal frame. Canada encourages to use AI passively, guaranteeing a more secure future. To ensure this we must detect AI when it is used and make sure it is not being used anonymously without the mention of AI being used. We also must spread awareness internationally, as most countries aren't aware of the AI being used around them at all times.

In conclusion, Canada encourages for responsible, transparent, and internationally coordinated use of AI to strengthen global cybersecurity, ensuring that emerging technologies are applied safely, ethically, and with clear accountability.
