Country: Republic of Türkiye

Committee: Legal

Agenda Item: International Regulations on Cybersecurity and Artificial Intelligence

Countries today face cyber-attacks, data leaks, and unsafe uses of Artificial Intelligence (AI). Türkiye believes that these problems can only be solved with international cooperation and clear global rules.

Türkiye works to protect its critical systems and personal data. The country supports developing AI for education, safety, and health, but believes AI must always be used responsibly and ethically.

Türkiye believes that:
1. States should share information about cyber threats.
2. AI must follow international ethical guidelines.
3. All countries should receive support to improve cybersecurity.
4. The UN should help create common digital standards.

Türkiye recommends:
- A global system to report cyber-attacks.
- International rules for safe and fair AI use.
- Training programs to help countries strengthen their cybersecurity.

Türkiye is ready to cooperate with all nations to make the digital world safer and ensure AI benefits everyone.
