

Committee: UN-HABITAT

Country: United Kingdom

Agenda: Building Sustainable and Smart Cities of the Future

The United Kingdom is the 11th biggest country in Europe. It is famous for its very old and important history and heritage. The United Kingdom also has one of the strongest economies in the entire World. Around 70 million citizens are expected to live in The United Kingdom in 2025. Because it is so important globally, The United Kingdom works with big groups like NATO and the UN (United Nations) on important international jobs.

Many people around the world live in cities with problems like pollution from factories, too much traffic, not enough space to live, and bad waste management. To make its cities better, The United Kingdom set three big goals in 2015: to create more money (economic growth), to make sure everyone benefits from this growth, and to make cities more strong and eco-friendly (sustainable). This new plan supports smart cities, which shows that The United Kingdom is focusing on making its cities and economy better for people and the environment.

The United Kingdom wants the UN to help build cities all over the World that are sustainable. This means building things like solar panels, using less oil and gas, and building wind turbines. These are extremely important things if we want to build lasting, sustainable cities. The United Kingdom invites other nations to join them in trying to fix this big problem for the World.
