

**Country:** United Kingdom

**Committee:** LEGAL

**Agenda Item:** International Regulations on Cybersecurity and Artificial Intelligence

The United Kingdom (UK) is a country in Northwestern Europe. It comprises England, Scotland, Wales and Northern Ireland. Its population is over 69 million. Its capital city is London. The UK has a highly developed social market economy. With an estimated nominal GDP of £2.765 trillion in 2024, it is the sixth largest national economy in the world and the second largest in Europe.

In today's world, digital safety is a serious problem. Cyberattacks, data breaches and misuse of AI systems affect both citizens and governments. Although the UK is one of the most secure countries in the world, it also has concerns about digital safety. The cyber threat to the UK comes from different sources. State and state sponsored groups, financially motivated criminal organisations and "hacktivists" with political aims are some of them. Like in many areas, the UK plays an important role in shaping international regulations on cybersecurity and artificial intelligence. The UK General Data Protection Regulation and the Data Protection Act 2018 are some of the data protection laws in the UK. Although these laws help regulate how to use and share personal information, cybercriminals always find new ways. Unfortunately, public services like healthcare services are also under the risk of cyber-attacks and it is a big risk to public safety.

These problems show that international cooperation and clearer global rules are essential. All UN members must take action to set international regulations and create a safer digital world. Stronger punishments and stricter rules are needed for data security in AI systems. The UK supports every action that can help set global standards, ensure responsible use of AI. The UK aims to promote safe technological development and protect protecting human rights, privacy and global stability at the same time. It is only possible by working together with all UN members.
