

ICELAND

My J MUN committee is LEGAL. And my country is Iceland. Iceland is a European country. It takes place in the north of the Arctic Ocean. There are around 356,991 people in Iceland. Iceland has the least people in it, according to other European countries. Also Iceland is 103,000 km² big.

The capital of Iceland is called "Reykjavik". Also Reykjavik is also the biggest city in Iceland. Iceland is a geologic and volcanic country. There are still volcanos in Iceland that are still active. Here are some good and bad informations about Iceland.

Good informations:

- * It is one of the most safe countries out there.
- * Their energy sources are reusable.
- * The first, ever woman president was chosen in 1980, Iceland (Democratically).
- * The reason streets are clean from snow is because there are hot water tubes under the pavements, so deaths they don't have to clean snow by themselves.

Bad informations:

- * There are almost no forests in Iceland.
- * Family members like brothers and sisters can have different surnames.
- * When parents have a child they have to name their kids from a list who is approved by the government.
- * The biggest whale deaths are from Iceland. And the reason killing them is to make lipsticks from whale fat.

Now lastly lets talk about the flag of Iceland. There are only 3 colours red, blue and white. The base is royal blue, there is a red cross, sided to the left side and white covers around the red cross. Red represents the volcanos, white represents snow and finally blue represents the mountains view looked up from the sky.
