

Country: The Domination of Canada

Committee: WHO2

Agenda Item: Addressing Health Issues Caused by Air Pollution

Located right above the top of North America above the United States. It is bordered on the west by the Pacific Ocean and on the east by the Atlantic Ocean. The US is to the south and to the north is the Arctic Ocean. Nearly taking up two-fifths of the North American continent. It's also ranked fourth in education. This is because over 95% of Canadians choose to send their kids to public schools and all public schools in Canada are publicly funded by the government and Canadian schools have extremely high standards set for education and frequent checks the government does. This ensures that the education meets international standards and it often even crosses them. Speaking of free public services about %70 of Canada's healthcare is also funded by the government. Canada also provides health care insurance not only to Canadians but it's also provided to any Canadian citizen or resident of Canada. Canada is also home to 40 million people. Canada is also ethnically diverse with over 450 ethnicities and cultural origins.

In 2021 Canada was ranked 11th in largest greenhouse gas emitter. Greenhouse gases contribute to respiratory disease from smog and air pollution which play a key role in air pollution. In fact, Canada's air pollution rate has gone up by double since 1998 because of the wildfire that caused Canada to get lower and lower air quality. Another large source for air pollution is industrial sources such as factories, cars, trucks, ships, trains etc. which directly pollute the air. We would also like to add that a large part of air pollution comes from airplanes and we should especially focus on limiting air pollutions that airplanes caused. This will help lower the rate of about 15,000 people each year passing away because of this issue.

To prevent further air pollution The Domination of Canada believes that we should take urgent action by first of all taxing human made air pollution sources such as factories, cars, trucks, ships etc. which would benefit the education and healthcare system because most taxes go towards providing the public with better quality public services.
