

We, as a delegation of Australia, are related to usage of vaccine in the whole world. Covid-19 affected people worldwide and our citizens as well. Therefore our purpose is the same as the WHO. We believe every people around the world should get vaccinated and be healthy.

We are in favor of not making the vaccine mandatory. We believe every people can make decisions about their body until it affects other people's life. Although vaccine is not mandatory, we recommend to get vaccinated to our citizens. We think vaccine is an important step for health.

Anyone over the age of 12 can get the free vaccine in Australia. Some families in Australia don't want to their children get vaccinated just because they are concerned. We want to change their mindset and inform people. We have published letters about vaccination in our Internet page. We believe that we can do more with cooperation.

Currently, the fully vaccination rate is %74.2 in Australia. The rate of the people who gets one dose is %78.3. We believe that we can boost that rates.

During this conference, our position towards vaccines will be positive and we will be cooperative. We believe that cooperation works well.

To sum up, we hope conference will work in our favor. We want that all the people around the world is healthy. We believe that we could share our thoughts and experiences with other honourable delegates. We can make a healthier world together.
