

Committee: Futuristic WHO  
Topic: Changing World order after the covid-19 and the place of the world health organization in new order  
Country: Canada  
Delegate: Manuel Fernandez Mollinedo

Good morning delegates and chairs.

As you know the main issue, that we as a committee are facing is the many repercussions that covid -19 has brought to the world and the new ones that MCoV21 has caused , this repercussions affect all the world in many different ways , our main topic as a committee is to ensure the vaccine distribution and production around the world

The delegation of Canada has been working on the problem since the first patients appeared in the nation, the Government of Canada has supported the repatriation of Canadians from high-risk areas , travelers arriving at all major Canadian airports receive information and, if coming from high-risk areas, are screened to determine steps needed to protect their health and that of others. In 2021 Canada alerted the whole world about the new cases and deaths that were caused by the MCoV21, then the government closed their borders to the whole world, after that the authority established new restrictions and a new lockdown, this method has worked in the nation and has been proved that it has decreased the numbers of daily infection in the country.

This delegation proposes the next solutions to the problems we are facing:

- The chosen vaccine should be mass produced depending the cost because of the current economic crisis.
- The vaccination program should start on the country's and the areas with the higher number of infected patients.
- Economical support should be giving to the countries with less economical resources.
- The vaccine should be produced in the five continents and should only be produced by the laboratories with capacity needed for the task.
- The cost of the production should be divided depending on the quantity that the country needs for covering their population.
- Boarder regulations should stay the same and it will only be changed only if the country decides to.

Thank you for your attention, and remember, we are living hard times and at this moment is when we need more unity and support to keep going to the future of the human kind, this are rough times but we as a race must remind to ourselves that we live on the same planet and that the only way we can get to a future is with global unity.
