

**Country:** Hungary

**Committee:** United Nations Environment Programme(UNEP)

**Topic:** Promoting the development of nuclear technology , Impact on the environment due to Covid-19 virus and armed conflict

The Republic of Hungary proposes that nuclear technology is safe for the future and it can be developed as a sustainable energy source. There are so many reasons for increasing the usage of nuclear energy. For example it's efficient, it's not harmful to nature with security measures and the amount of waste material is low. The usage of fossil fuels such as oil and natural gas, pollutes the air and environment. Also these fossil fuels cause global warming. We think we should increase the number of nuclear power plants and stop polluting the environment because of fossil fuels.

Secondly, we want to talk about the impact of the covid-19 virus on the environment. We all know that after the emergence of this virus, the usage of plastic products such as masks and gloves has increased a lot. In addition to this, the water used for disinfection was consumed largely. Our solution proposal is to throw plastics like masks and gloves into recycling bins instead of throwing them into the environment or sea. Also we must clean the remaining wastewater by establishing treatment facilities. In this way, we do not waste unnecessarily excess water.

Finally, we want to focus on armed conflict and it's impact on the environment. Armed conflicts and wars harm the environment as much as they harm people. Especially chemical, biological, nuclear and conventional weapons cause a lot of harm to nature, animals and the other living things. When using combat vehicles ,such as planes and tanks, we must be careful because any explosion will cause air pollution. The solution proposal of our country ; we have to solve the political situations by talking peacefully, not by fighting.
