

*Honorable chair ,Fellow delegates*

As the delegate of Russia Federation, we feel honored to take part in this significant meeting.

In 1760 first industrialization started in Great Britain at first it was a good thing with industrialization, humanity can made goods way cheaper then it before but there was a downside carbon emission, fossil fuels were required to produce industrial products which causes to global warming and greenhouse effect, after almost 300 years The world is still using fossil fuels in factories. So we can see fossil fuels are the biggest reason for carbon emission and respiratory ailments.

In 27th June 1954 Obninsk Nuclear Power Plant the first nuclear power plant in the world opened in Russia in soviet era which nuclear energy is a clean energy if you take a good care of yours power plants which russia is making a good job at it in the past some accidents happend but Russia always renew their power plants if it needed.

As the Russian Federation we take care of our forests. We have got national parks and we are trying to reduce the carbon emissions and we joined environmental programs like Kyoto. For the next phase of combating climate change we need to Increasing afforestation efforts, and faster transition to clean energy we have to do.

We, as The Russia Federation, are open to cooperation with other countries and we would be happy if other countries agree. We want to give humans and the next generations a better place.
