Country:Kingdom of Denmark

Committee: GA1:DISEC(Disarmament and International Security)

Agenda Item:Weaponization of Data and Cyber Security

For a variety of reasons, including social media and online purchasing, businesses are collecting massive amounts of customer data. Social media posts can tell a lot about a person's habits, likes, personal networks, and so on. Regrettably, some businesses profit from this data without acquiring proper authorization. Whether a company sells acquired data or data is obtained illegally through a breach, the weaponization of information is a clear and present danger.

When it comes to the digital transformation of society, Denmark is one of the world's leaders. In Denmark, people's private lives, work lives, and connections with the Danish government are all digital.

Government and critical infrastructure, as well as people and businesses, are all part of the strategy. To protect Denmark from malicious cybercrime and cyber espionage, a collaborative effort is required. With a variety of activities that will bind the whole efforts together, the strategy will boost the endeavor even more. To put the policy into action, the government has set aside DKK 270 million (EUR 36 million) from 2022 to 2024 for 34 initiatives that will equip Denmark to combat cyber threats in the future.

The international cyber and information security environment presents a number of challenges as well as opportunities. The National Strategy for Cyber and Information Security launches a number of initiatives aimed at raising Denmark's international profile, strengthening ties with the international technology and cybersecurity industry, and ensuring that cyber attacks and espionage against Denmark and our allies are expensive and costly stay.

The Kingdom of Denmark is fully supporting use of cyber security.As a result of that,for our defences and future both weaponization of data and cyber security as nations of the world we sould set up new laws and we should make any action to prevent and decrease the rates of cyber crimes.As the Danish government we are ready to take any actions with other nations.
