

Delegate: Özge Emir

Country : Qatar

Committee: UNEP

Agenda Item : Enhancing the transition to sustainable energy as a response to the energy crisis and climate change

QATAR

Overview

Qatar is a country in Western Asia. It occupies the small Qatar Peninsula on the northeastern coast of the Arabian Peninsula ,Qatar's population is 2.781.677 ,Qatar's area is 11.586 km².The economy of Qatar is one of the richest in the world based on GDP per capita.Qatar is one of the leading countries in oil and thanks to oil, it is one of the countries with the highest national income.The country has the world's third largest proven natural gas reserves with 7000 km³ and accounts for more than 5% of the world's total reserve of . Our country' current president is Emiri Şeyh Temim.

Committee

The United Nations Environment Programme (UNEP),Established to help developing countries with regard to the environment and to solve environmental problems UN agency. It was established in June 1972 and first director is Maurice Strong.The organization also develops international environmental treaties; publishes and promotes environmental science and helps national governments achieve environmental goals.

Agenda

The agenda item of our committee is using sustainable energy as a response to the climate changes. As you know, with global warming, some major problems such as climate changes have emerged, and countries have added environmental-related clauses to their policies to prevent them, but as you have noticed, these cannot be said to be of much use. Renewable energy includes sources like sunlight, wind, rain...It is to reduce some pollution such as air and water, and at the same time to ensure that the next generation lives in a cleaner place.

Objectives and Resources

For the past few decades, Qatar has taken a leading role in international efforts to combat climate change and promote sustainable development through the export of natural gas and its derivatives to the world energy market. Finally,I think every country should pay more attention to this issue because our future is in question and if we think that we will come to the Aegean, each country should continue to work on this issue.
